KEY REQUIREMENTS

COMPANY VEHICLE SAFETY

This key requirement provides the minimum requirements for procurement, fleet managers and buyers for the selection of all newly purchased or leased motor vehicles that are to be driven on public roads.

When selecting vehicles for Bunge use, consider how they will be used, their safety features and performance.

It's important when selecting a company vehicle to not make the decision based solely on cost. The vehicle selection must also consider safety features, intended use and typical road conditions.

In regions or countries where these mandatory safety requirements are not readily available, discuss with key stakeholders including regional safety to make an informed decision.

The following safety requirements are mandatory for leased or procured company vehicles:

1

SAFETY RATING

Prioritize the highest safety rated vehicle, for example, a 'four or five star' rating as recognized by New Car Assessment Program (NCAP) NHTSA or equivalent rating system.

2

BRAKING

Anti-locking brakes (ABS)

Prioritize Autonomous Emergency Braking / Forward Collision Warning Systems - warning system or applies the brakes

3

SPEED

Cruise Control maintains vehicle speed at the level pre-set by the driver, unless the driver brakes.

4

COLLISION AVOIDANCE

Lane Departure Warning or Lane Keeping Support systems. These systems warn the driver if they are unintentionally straying out of their lane or if they change lane without indicating.

Blind Spot Monitoring The systems monitor the area behind, and adjacent to, the car that the mirrors do not cover (blind spots).

5

REVERSING AND PARKING AIDS Reversing cameras to see behind during reversing and audible warning system. The viewing screen must be large enough to make it easy to view.

6

LIGHTS

Automated lights / Daylight Running Lights

7

ELECTRONIC STABILITY CONTROL (ESC)

Traction Control monitors the rotation of the wheels, and if necessary, applies and releases the brakes in rapid succession to reduce wheel spin and help the driver to move safely.

8

OCCUPANT PROTECTION

Seat Belts fitted in every seat.

- Seat Belt Reminder systems

Head Restraints - front and rear

Airbags - front driver and passenger airbags, and side airbags

9

HANDS-FREE TECHNOLOGY

(i.e., Apple car play)

10

POWER ADJUSTABLE SIDE MIRRORS

11

SPARE TIRE/WHEELS

12

EMERGENCY KITS

13

DRIVE TRAIN

In regions or locations where inclement weather (i.e., snow, ice) is expected All Wheel Drive or 4 Wheel Drive options must be provided for employees to choose. In these locations rear wheel drive only vehicles are prohibited.

14

WINTER TIRES

In regions or locations where inclement weather (snow, ice) is expected.
